TYRE INFLATION TOOLS & ACCESSORIES

| ITEM NO. | DESCRIPTION |
|--|---|
| AIR CHUCKS | |
| NON-SEALING TYPE AIR CHUCKS | |
| The Non-Sealing Air Chucks employ a "check valve" which will not seal the opening of the chuck when pressurised; however, it will open the core on the tyre valve creating an "opening" between the chuck and tyre. Therefore a non-sealing air chuck should be used on a gauged airline in order to function properly | |
| SEALING TYPE AIR CHUCKS | |
| Sealing Type Air Chucks employ a "check valve" which seals the chuck, closing the air passage while it is not being used, and when used, it will open the core on the tyre valve, allowing pressure from the hose to be transferred to the tyre. When a "live" non-gauged airline is used for inflation of the tyre, a sealing chuck should be used. | |
